

Green and Clean Tomorrow

GALLE: The Garbage menace, whether in the city or in the rural area - the smell and flies spread everywhere, diseases spread and so do the health hazards.

We too as citizens have a social responsibility towards keeping the cities clean rather than complaining to the Government, Provincial, Urban or Municipal Councils.

Learn to segregate garbage at home for a cleaner tomorrow. It is not a difficult task. Segregation of waste is very simple. Just keep two bins at home. The Blue bin for non-biodegradable waste like glass bottles, metal cans, plastic bottles etc. The Green bin for biodegradable waste like left over vegetables, fruit peels, tealeaves and garden waste.

Compost Bins should be an essential and integral part of every new house built in Sri Lanka and all other houses in this beautiful tropical island. This will help protect the family from diseases. The compost will help our plants grow better and make our environment green.
