TTI iPod Turntable

Nurmak has introduced the TTI iPod turntable, a turntable that includes a Universal Dock for iPod, USB audio interface, a metal platter and pitch control, making it one of the most versatile turntables ever produced. Nurmak turntable performance, USB connectivity and the convenience of the iPod are fused together so users can easily transfer old vinyl collections to an iPod. The included software bundle archives records directly to the user's iTunes library for transfer to CD or any MP3 player.

The software also reduces noisy pops and clicks inherent on some old vinyl recordings. Owners of iPod (Classic or 5th generation) and iPod nano (2nd or 3rd generation) can record from vinyl directly to an iPod without a computer. People with other iPod models can transfer captured vinyl recordings to their iPod by using iTunes to transfer the tracks after recording.

TTI's integrated line-level output allows quick, easy connection and instant playback from an iPod or vinyl record. Included ±10 percent pitch control enables adjustment of playback speed. 33 and 45 RPM playback speeds are supported, and 78 RPM recording is possible using the included software. Line-level outputs also enable easy connection to home AV Receivers, without the need for a Phono Input on the receiver, making TTI a great match for home stereo setups or a home office.

LED Cake tray

There are few things in this world as awesome as cake. Well if you're serious about your cake loving habits, here's a gadget to go with your cake. It makes sure that all of your slices are just right. Not only that, but you get a barely justifiable gadget to clutter up your already stocked full kitchen cabinets.

Which is a nuisance, but you can't have the cake feeling left out. After all, you have a kitchen gadget for every other task you could possibly think up. The tray has little LED lights that guide you along to show you just where to cut.

You just press the power button and choose just how many slices you need. You can pick anywhere from 2 on up to 12. It has a Lazy Susan that allows for the tray to spin around during slicing or while you're putting icing on the cake. Then to top it off, instead of listening to your off key version of the Happy Birthday song, the tray can play the song for you.

Colour Change Aurora Alarm Clock

Here is a gadget which will look great in your house: the Colour Change Aurora Alarm Clock. Also this is a good Christmas gift idea. Wake up with a light show and get your day off to a bright start with this amazing color changing alarm clock! A spectrum of 12 glowing colors which change color every hour. Displays time, date and alarm time.

Dual lens camera

A digital camera with wide-angle lens and 3X optical zoom lens selects automatically the proper one of the two depending on the scene desired.

LED Eye Lashes

I've never been a fan of false eyelashes. Something about the idea of putting glue anywhere near my eyes gives me the willies. So when I saw these, I was extra freaked out. These babies actually have LED's attached to them (Great glue and light). As much as they give me the heebie jeebies, I definitely admire the creativity of Soomi Park, the funky eyelash creator.

The LED eyelashes are rigged to turn on when the wearer tilts their head a certain way. Eye phobias aside, these would be an awesome addition to a Halloween costume or we might be looking at the eyewear of the future.

Media Chair

If you're all about being immersed in your music, this chair is definitely the way to pull that off. With the speaker right up around your head, and the cozy look of the chair, you'll be able to get lost for hours. I just wish it were a swivel chair, then it'd have that command center type appeal. Although, you could get that super villain kind of look if you picked up the black version of the chair.

The chair is made out of hard plastic and then the seat has soft foam covered in leather or the fabric of your choosing. Your iPod is seamlessly integrated into the headrest. The headrest has a 3 way speaker that gives you that nice surround sound we all know and love. They've also put a compact projector into the left side of the chair's headrest.

Ice Cream Ball

Unique gadgets usually get attention not just by how they look but also in terms of their function. One such kind of ununiqueness is the Ice Cream Ball. A look at this gadget and what it does will make you think that you should have one at home.

The Play and Freeze Ice Cream Ball, just by the name itself, may already give you an idea on what this unique device is all about. It will enable you make your own ice cream in a quite unique way. For one, it doesn't require any electric power to make the ice cream.

All it requires is the principle of thermodynamics put into work along with some physical effort. You would need milk and cream mix, some ice and rock salt. You put them inside their respective compartments in the Ice Cream Ball, close it and then roll it around for about 20 minutes.

Waterproof Bluetooth Speaker

When you're lazing about in the pool, that is the one time you should never ever be lacking music. Without music, you're left listening to your own thoughts or even worse, birds. We all know that's not fun and not fulfilling in the least. You need music to play and loudly. Well with this speaker, you can float it right alongside of you and never have to worry about getting out of the water to crank the volume. Just add a little alcohol to the mix and you have the perfect at home vacation.

Since it uses Bluetooth, you'll have to have an MP3 player with Bluetooth or a phone with MP3s on it, such as an iPhone. As long as you have that handy, it'll play your music, but to use to keep it within 30 feet of the speaker. When a call comes in, it'll stop playing music. One down side to setting your device so far away is that in order to skip a song you would have to get out, unless you get a waterproof case for that as well.

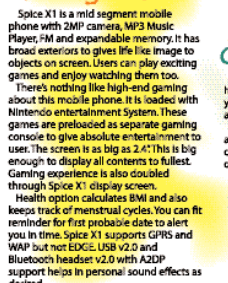

Spice Launches new Gaming Mobile X1

Spice X1 is a mid segment mobile phone with 2MP camera, MP3 Music Player, FM and expandable memory. It has broad exterior to give life like image to objects on screen. Users can play exciting games and enjoy watching them too.

There's nothing like high-end gaming about this mobile phone. It's loaded with Nintendo entertainment system. These games are preloaded as separate gaming console to give absolute entertainment to user. The screen is as big as 2.4". This is big enough to display all contents to fullest. Gaming experience is also doubled through Spice X1 display screen.

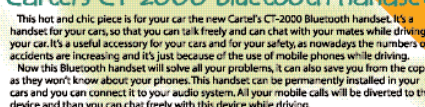

Health option calculates BMI and also keeps track of menstrual cycles. You can get reminder for first probable date to alert you in time. Spice X1 supports GPRS and WAP but not EDGE, USB v2.0 and Bluetooth headset v2.0 with A2DP support helps in personal sound effects as desired.

Cartel's CT-2000 Bluetooth handset

This hot and chic piece is for your car: the new Cartel's CT-2000 Bluetooth handset. It's a handset for your cars, so that you can talk freely and can chat with your mates while driving your car. It's a useful accessory for your cars and for your safety as nowadays the numbers of accidents are increasing and it's just because of the use of mobile phones while driving.

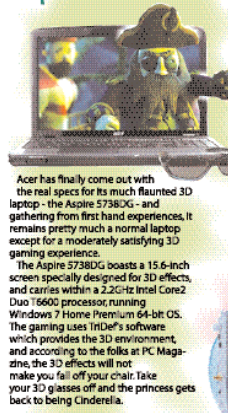

Now this Bluetooth handset will solve all your problems, it can also save you from the cops as they won't know about your phones. This handset can be permanently installed in your cars and you can connect it to your audio system. All your mobile calls will be diverted to this device and then you can chat freely with this device while driving.

Acer's 3D notebook Aspire 5738DG

Acer has finally come out with the real specs for its much lauded 3D laptop - the Aspire 5738DG - and gathering from first hand experiences, it remains pretty much a normal laptop except for a moderately satisfying 3D gaming experience.

The Aspire 5738DG boasts a 15.6-inch screen specially designed for 3D effects, and carries within a 2.2GHz Intel Core2 Duo 1660 processor running Windows 7 Home Premium 64-bit OS. The gaming uses InDee's software which provides the 3D environment, and according to the folks at PC Magazine, the 3D effects will not make you fall off your chair. Take your 3D glasses off and the princess gets back to being Cinderella.

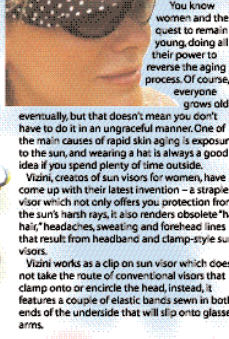

Sun visor

You know women and their quest to remain young, doing all in their power to reverse the aging process. Of course, everyone grows old eventually, but that doesn't mean you don't have to do it in an ungraceful manner. One of the main causes of rapid skin aging is exposure to the sun, and wearing a hat is always a good idea if you spend plenty of time outside.

Vazni, creators of sun visors for women, have come up with their latest invention - a strapless visor which not only offers you protection from the sun's harsh rays, it also renders obsolete "hat hair", headaches, sweating and forehead lines that result from headbands and clamp-style sun visors.

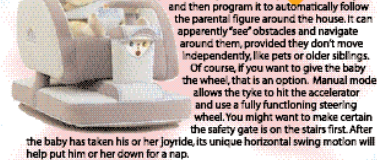

Vazni works as a clip on sun visor which does not take the route of conventional visors that clamp onto or encircle the head, instead, it features a couple of elastic bands sewn in both ends of the underside that will slip onto glasses arms.

Robot Baby Carriage

The Bomo Robot Baby Carriage might be one that I probably wouldn't buy, even if I could afford it. The point of this product is to put the little baby in, and then program it to automatically follow the parental figure around the house. It can apparently "see" obstacles and navigate around them, provided they don't move independently. See pets or older siblings.

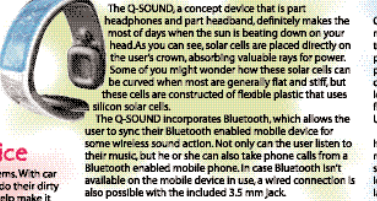

Of course, if you want to give the baby the wheel, that is an option. Manual mode allows the type to hit the accelerator and use a fully functioning steering wheel. You might want to make certain the safety gate is on the stairs first. After the baby has taken his or her joyride, its unique horizontal swing motion will help put him or her down for a nap.

Solar powered headphones

The Q-SOUND, a concept device that is part headphones and part headband, definitely makes the most of days when the sun is beating down on your head. As you can see, solar cells are placed directly on the user's crown, absorbing valuable rays for power. Some of you might wonder how these solar cells can be curved when most are generally flat and stiff, but these cells are constructed of flexible plastic that uses silicon solar cells.

The Q-SOUND incorporates Bluetooth, which allows the user to sync their Bluetooth enabled mobile device for some wireless sound action. Not only can the user listen to their music, but he or she can also take phone calls from a Bluetooth enabled mobile phone. In case Bluetooth isn't available on the mobile device in use, a wired connection is also possible with the included 3.5 mm jack.

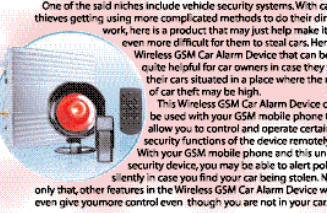

GSM Car Alarm Device

One of the said riches include vehicle security systems. With car thieves getting using more complicated methods to do their dirty work, here is a product that may just help make it even more difficult for them to steal cars. Here is a Wireless GSM Car Alarm Device that can be quite helpful for car owners in case they find their cars situated in a place where the risk of car theft may be high.

This Wireless GSM Car Alarm Device can be used with your GSM mobile phone to allow you to control and operate certain security functions of the device remotely.

With your GSM mobile phone and this unique security device, you may be able to alert police instantly in case you find your car being stolen. Not only that, other features in the Wireless GSM Car Alarm Device would even give you more control even though you are not in your car.

Pocket Surfer 2

Phones are phones, and are definitely net web browsers that is the idea behind Pocket Surfer 2. The Pocket Surfer 2 is indeed pocket sized, and yet is jammed with technological magic to let you browse web pages with full graphics, Java support. The built-in GPRS modem lets you zip effortlessly around the web wherever and whenever you like, displaying the pages in all their glory on its 5.1 color screen.

Powered by a re-chargeable battery Pocket Surfer 2 will provide four hours of surf time (with 5 days on standby), giving you plenty of time to check your emails, fiddle about on Facebook or whatever your preferred networking is.

Some of the Pocket Surfer 2 features are: * A pocket-sized, totally wireless link to the web wherever you are. * Backlit QWERTY keyboard and integrated mouse. * Works with any network. * A mouse point. * Weight: 174g.

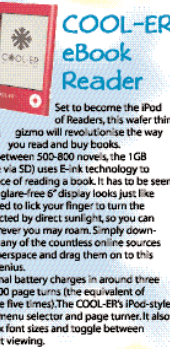

COOL-ER eBook Reader

Set to become the iPod of Readers, this waffer thin gizmo will revolutionise the way you read and buy books.

Capable of storing between 500-800 novels, the IGB COOL-ER (expandable via SD) uses E-ink technology to replicate the experience of reading a book. It has to be seen to be disbelieved: the glare-free 8" display looks just like paper. You'll be tempted to lick your finger to turn the pages. It's also unaffected by direct sunlight; so you can carry on reading wherever you may roam. Simply download your books from any of the countless online sources floating around in cyberspace and drag them on to this USB friendly slice of genius.

The COOL-ER's internal battery charges in around three hours and lasts for 8000 page turns (the equivalent of reading War and Peace five times). The COOL-ER iPod-style scroll wheel acts as a menu selector and page turner. It also lets you select from six font sizes and toggle between landscape and portrait viewing.
